

Tia Cibani Showroom Display

OPerA Studio is currently designing the retail spaces and offices for a new fashion design company. The new stores will include a variety of custom fabricated display elements including this space divider screen with integrated display shelving. The screens will be fabricated from a series of laser cut sheet metal panels that will be bent and clamped together at pre cut locations. A bent mahogany sheet will be sandwiched between the metal planes to create the shelves for accessories and other products. The individual sheets are arrayed in a fan configuration to create the dramatic effect of direct and indirect light filtering through the screen.
